

Troubleshooting Methodologies: Hardware, Software and Network Problems

Miguel Chavez
C&C Computer Factory

miguel@c3factory.com

pre-pres0 tl;dr

- Feel good? Sorry, bitter truths within
- Listen & observe, but don't expect truth handed to you
- Exude confidence, even if you're not sure yet
- 75% is you NOT being technical, 25% is actual technical brawn
- Stay **HUNGRY**
- OK, feel free to take a nap until LUNCH!

Know the boundaries

- Respect the client's patience
- Not all clients want to pay hours just to hunt down one problem (if you have that client: yay!)
- Balance between thoroughness and Alexander at the Gordian Knot
- Subs - SLA differences?

How to diagnose

- Usually they want you to ‘take over’ and figure out what’s going on. Not so fast!
- Tell them to sit in the driver’s seat and ‘show me’ what’s been going on
- Sometimes you have to hear the words that aren’t being spoken
- Your vast experience is your trusty co-pilot.

Troubleshooting Mindset

- Most problems all lead to same core set of problems:
 - Something's broken
 - Something's unplugged
 - Something's glitching
 - Someone did something wrong
- Remember the Gordian Knot

Put them at ease

- I'm here to help
- Commiserate
- **Be** confident – but not cocky
- Pretend to listen even if you've already got a bead on the problem
- Trust me — you're a therapist

Basics

- Before arriving, prep ahead
- Can the error be reproduced?
- Start small/easy, work your way up to big/hard — split half tests
- When testing a hypothesis/solution, always give yourself an escape hatch
- **BACKUP BACKUP BACKUP**

Things to assess

- Isolated to one machine?
- Isolated to one user account?
- Wear and tear? How old is the computer?
- How recent did the problem start?
Anything change since then?
- Clean power?

Things to assess

- Does your pristine laptop, as a 'control,' not have the same problem?
- Updates recently applied?
- What sez the intertoobs?
- Physical location a clue?
- Anything weird going on?

Simple easy tricks

- Ahem, restart the machine
- Safe boot – flush the caches
- Create a temp user
- Reseat memory, cables, etc.
- Temp swap the library folder
- Swap parts e.g. Cables, RAM, etc.
- Reapply last combo updater

You fixed it!

- Confirm with the user
- Test and double-test
- Document the issue and solution
- If origins are suspicious, keep an eye out
- Are you sub-ing? Paper trail even more important

Troubleshooting Physical Tools

- Ext. drives with various systems/
installers/updaters
- Network / tone / ground tester. Cables!
- Don't be stingy with good drivers
- Real champ? Carry spare RAM!
- Real champ with strong back? Spare UPS!

- Side - Power
Flashing Red = Disk Activity
5. Power receptacle
 6. USB 3.0/2.0/1.1 port
 7. eSATA port
 8. Two FireWire 800 (1394b) ports
 9. FireWire 400 (1394a) port

**Works with
Macs AND PCs!**

Built-in Tools

- Disk Utility

[Introduction](#) » [Download](#) » [Install](#) » [Support](#) » [Feature Requests](#) » [Submit a Bug](#) »

[AppleJack man page](#)

Introduction

CURRENT PROJECT VERSION: 1.6

AppleJack is a user friendly troubleshooting assistant for Mac OS X. With AppleJack you can troubleshoot a computer even if you can't load the GUI, or don't have a startup CD handy. AppleJack runs in Single User Mode and is menu-based for ease of use.

Rating
 (4.9115)
[add a comment](#)

```
Enter the associated number or letter to choose your maintenance task.  
It is strongly recommended you do them in the order listed!
```

```
[a] auto pilot. Script will do all tasks sequentially.
```

```
[1] repair disks  
[2] repair permissions  
[3] cleanup cache files  
[4] validate preference files  
[5] remove swap files
```

```
[q] : Just quit, thank you very much.
```

```
Your choice: 
```

Using AppleJack, you can repair your disk, repair permissions, validate the system's preference files, and get rid of possibly corrupted cache files. In most cases, these operations can help get your machine back on track. The important thing is that you don't need another startup disk with you. All you need to do is restart in Single User Mode (SUM), by holding down the command and s keys at startup, and then typing applejack, or applejack auto (which will run through all the tasks automatically), or applejack auto restart (which will also restart the computer automatically at the end of the process).

xlr8yourmac.com has compiled a [list of user experiences with AppleJack](#) which might help you evaluate its usefulness to you. Thanks guys!

Dan Frakes has written a [nice summary](#) of the benefits and drawbacks to AppleJack for macfixit.com. It's thorough and much better written than anything I could have done.

What you have to learn

- Files & Permissions
- OS X standard directories
- Single user mode
- Terminal commands
- What OS X can do for you

What you should learn

- CUPS localhost:631
- dscacheutil -flushcache
- dd and GNU ddrescue
- fs_usage tcpdump -vv -i eno
- redirect output to text file for uber-manipulation
