**I think I want a
new MacBook.**

Why Apple II is the world's best selling personal computer.

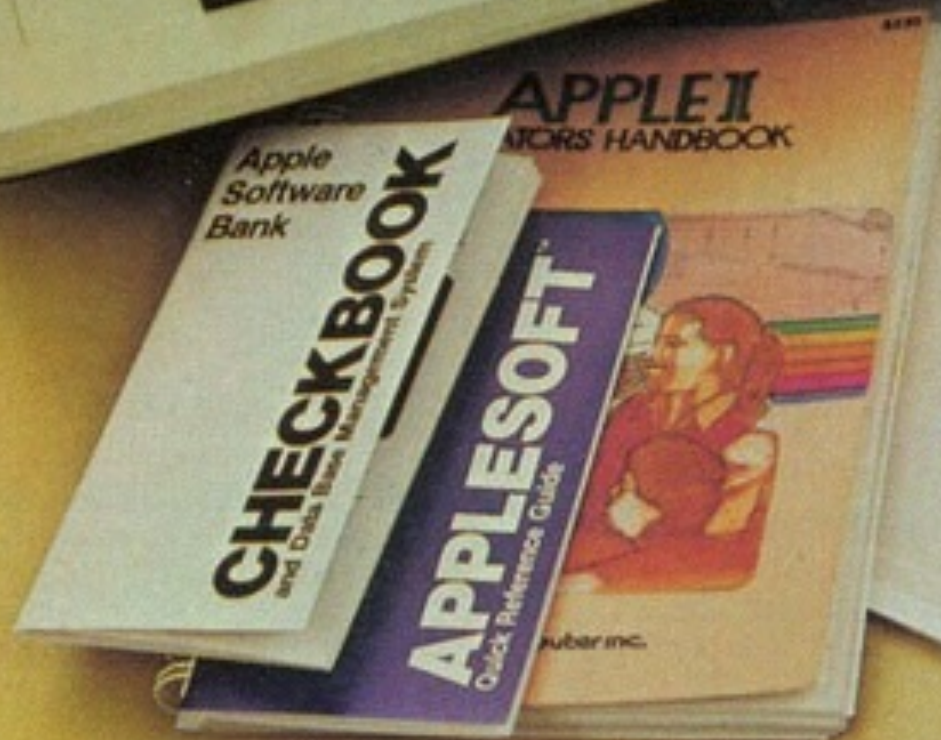

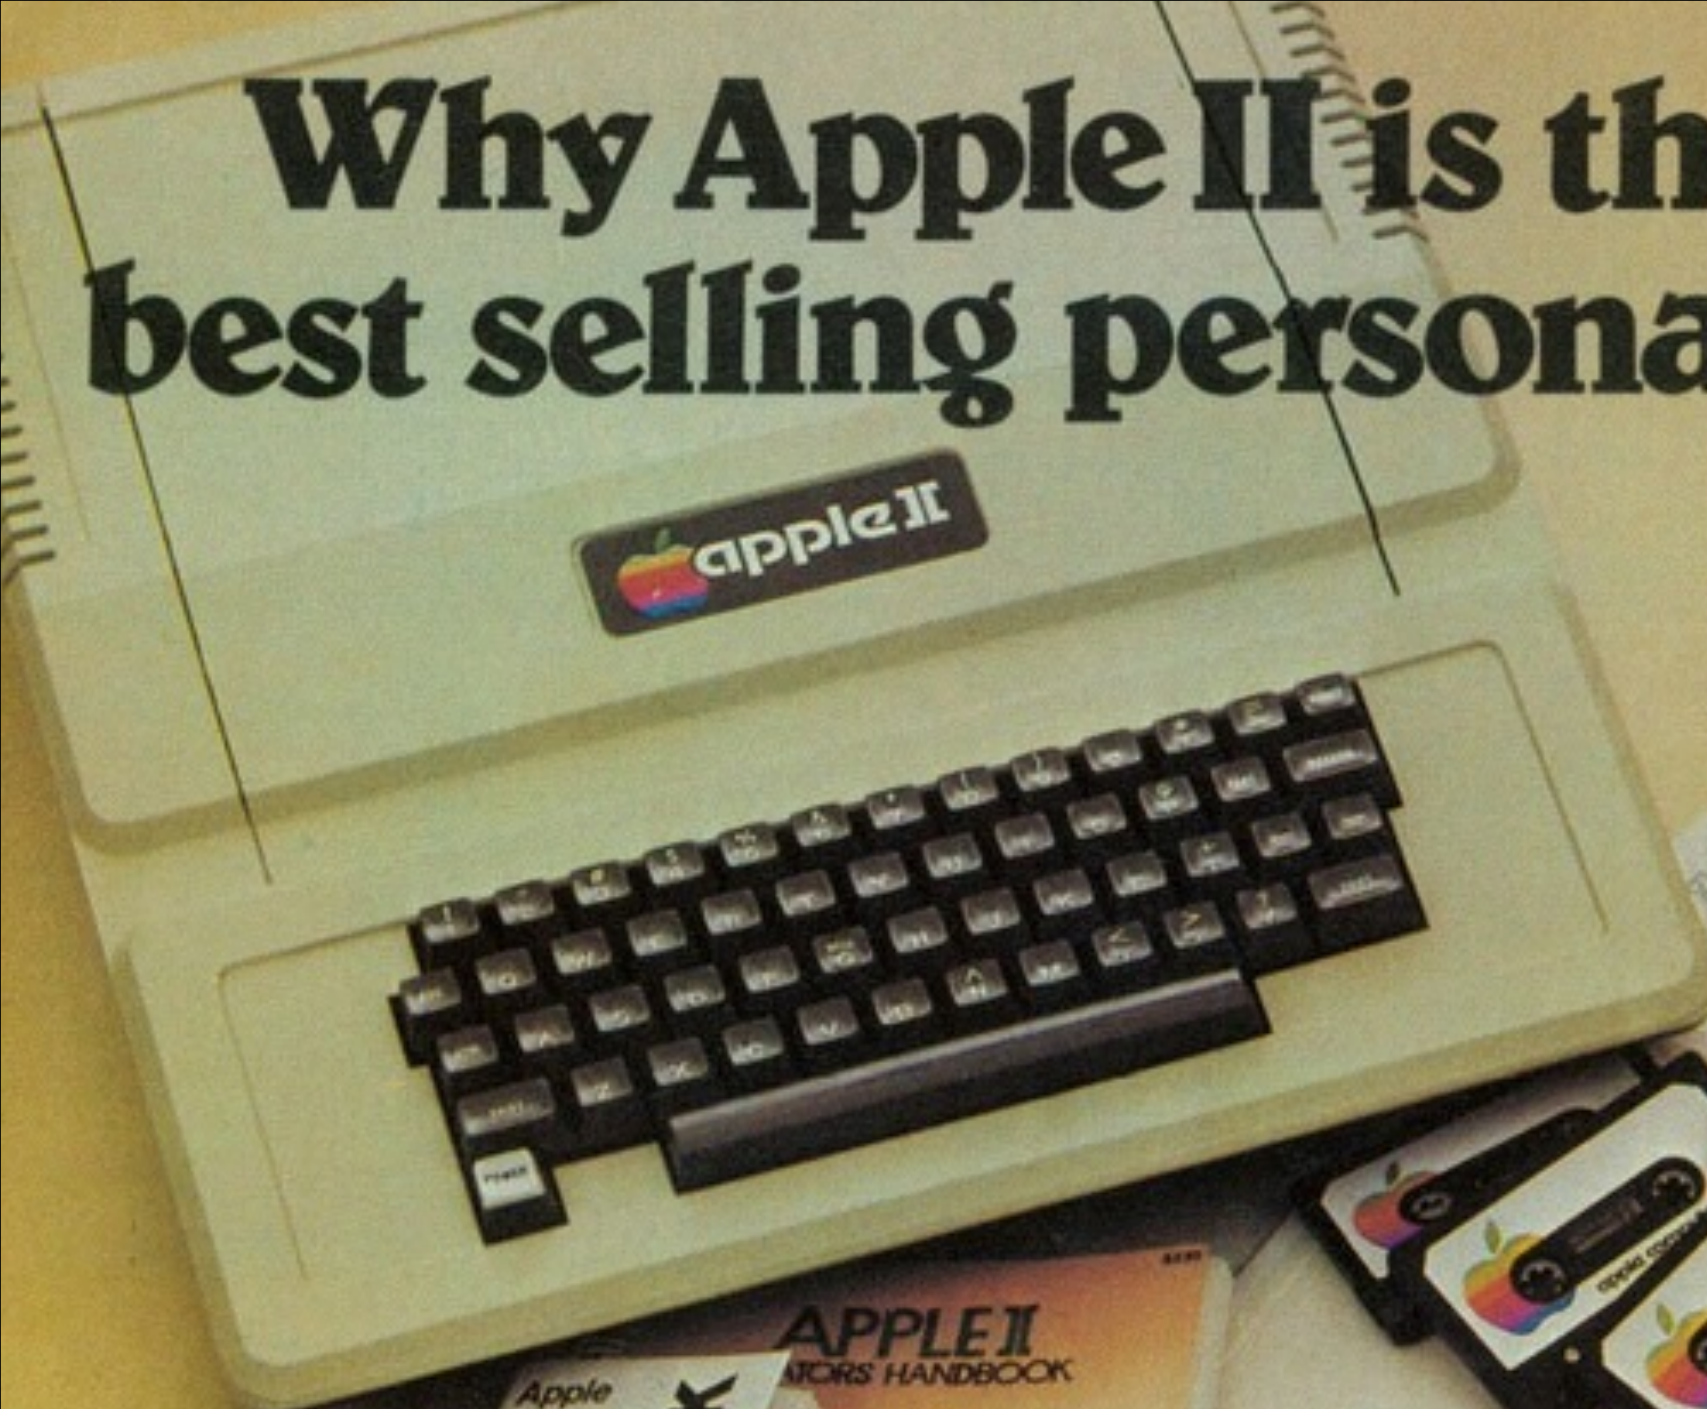

enjoy the real satisfaction a personal computer can bring, today and in the future.

15 colors & hi-resolution graphics, too.

Don't settle for a black and white display! Connect your Apple to a color TV and BASIC gives you instant command of three display modes: Text, 40h x 48v Color-graphics in 15 colors, and a 280h x 192v High Resolution array that lets you plot graphs and compose 3-D images. Apple gives you the added capability of combining text and graphics, too.

Back to basics, and assembly language too.

Apple speaks three languages: fast integer BASIC, floating point BASIC for scientific and financial applications

Which personal computer will be

**Good, Better
and Best.**

1997: The Era Of

- Good
- Better
- Best
- Better than the first one
- Not as good as the third, maybe?
- Oh, is that a different model from the second?
- No, I mean the first second one.
- Could you show me the fourth one again?
- Umm...
- On second thought, can I just use your restroom?

Mobile PCs	MacBook Air	MacBook Pro	MB Pro Retina
Tablets	iPad Mini	Retina Mini	iPad Air

What I Think Will Happen:

The iPad Air changes from the "Best Tablet"
to the "Good Mobile PC."

MacBook Air moves up to "Better."

The iPad Air receives ongoing
ambitious upgrades.

Apple adds a new "iPhone 5c"-style iPad Mini.

**But what would
this mean for
the Mac?**

People of MacOS:
You Will Be
ASSIMILATED.

**"The only product
worthy of killing
an Apple product
is another Apple
product."**

Apple is Steve Jobs.
Google is Woz.

**"Good, Better,
and Best" are
highly malleable
concepts.**
