snmp

Simple Network Management Protocol

SNMP
Yeah, you know me

- Protocol to transmit device data
  - Performance
  - Health Status
  - Event Notification
- Supported by 99% of devices
- Mostly implemented in Data Centers
- Device Independent

SNMP
Yeah, you know me

- SNMPv1
- SNMPv2c
- SNMPv3

SNMP
Yeah, you know me

- SNMP Manager
- Devices
- SNMP Agents
- Management Information Bases (MIBs)

SNMP Manager

- Queries agents
- Gets responses from agents
- Sets variables in agents
- Acknowledges asynchronous events from agents

Managed Devices

- Routers
- Switches
- Servers
- Workstations
- Printers
- UPSs
- etc…

SNMP Agent

- Collects management information about its local environment
- Stores and retrieves management information as defined in the MIB.
- Signals an event to the manager.
- Acts as a proxy for some non–SNMP manageable network node.

MIB

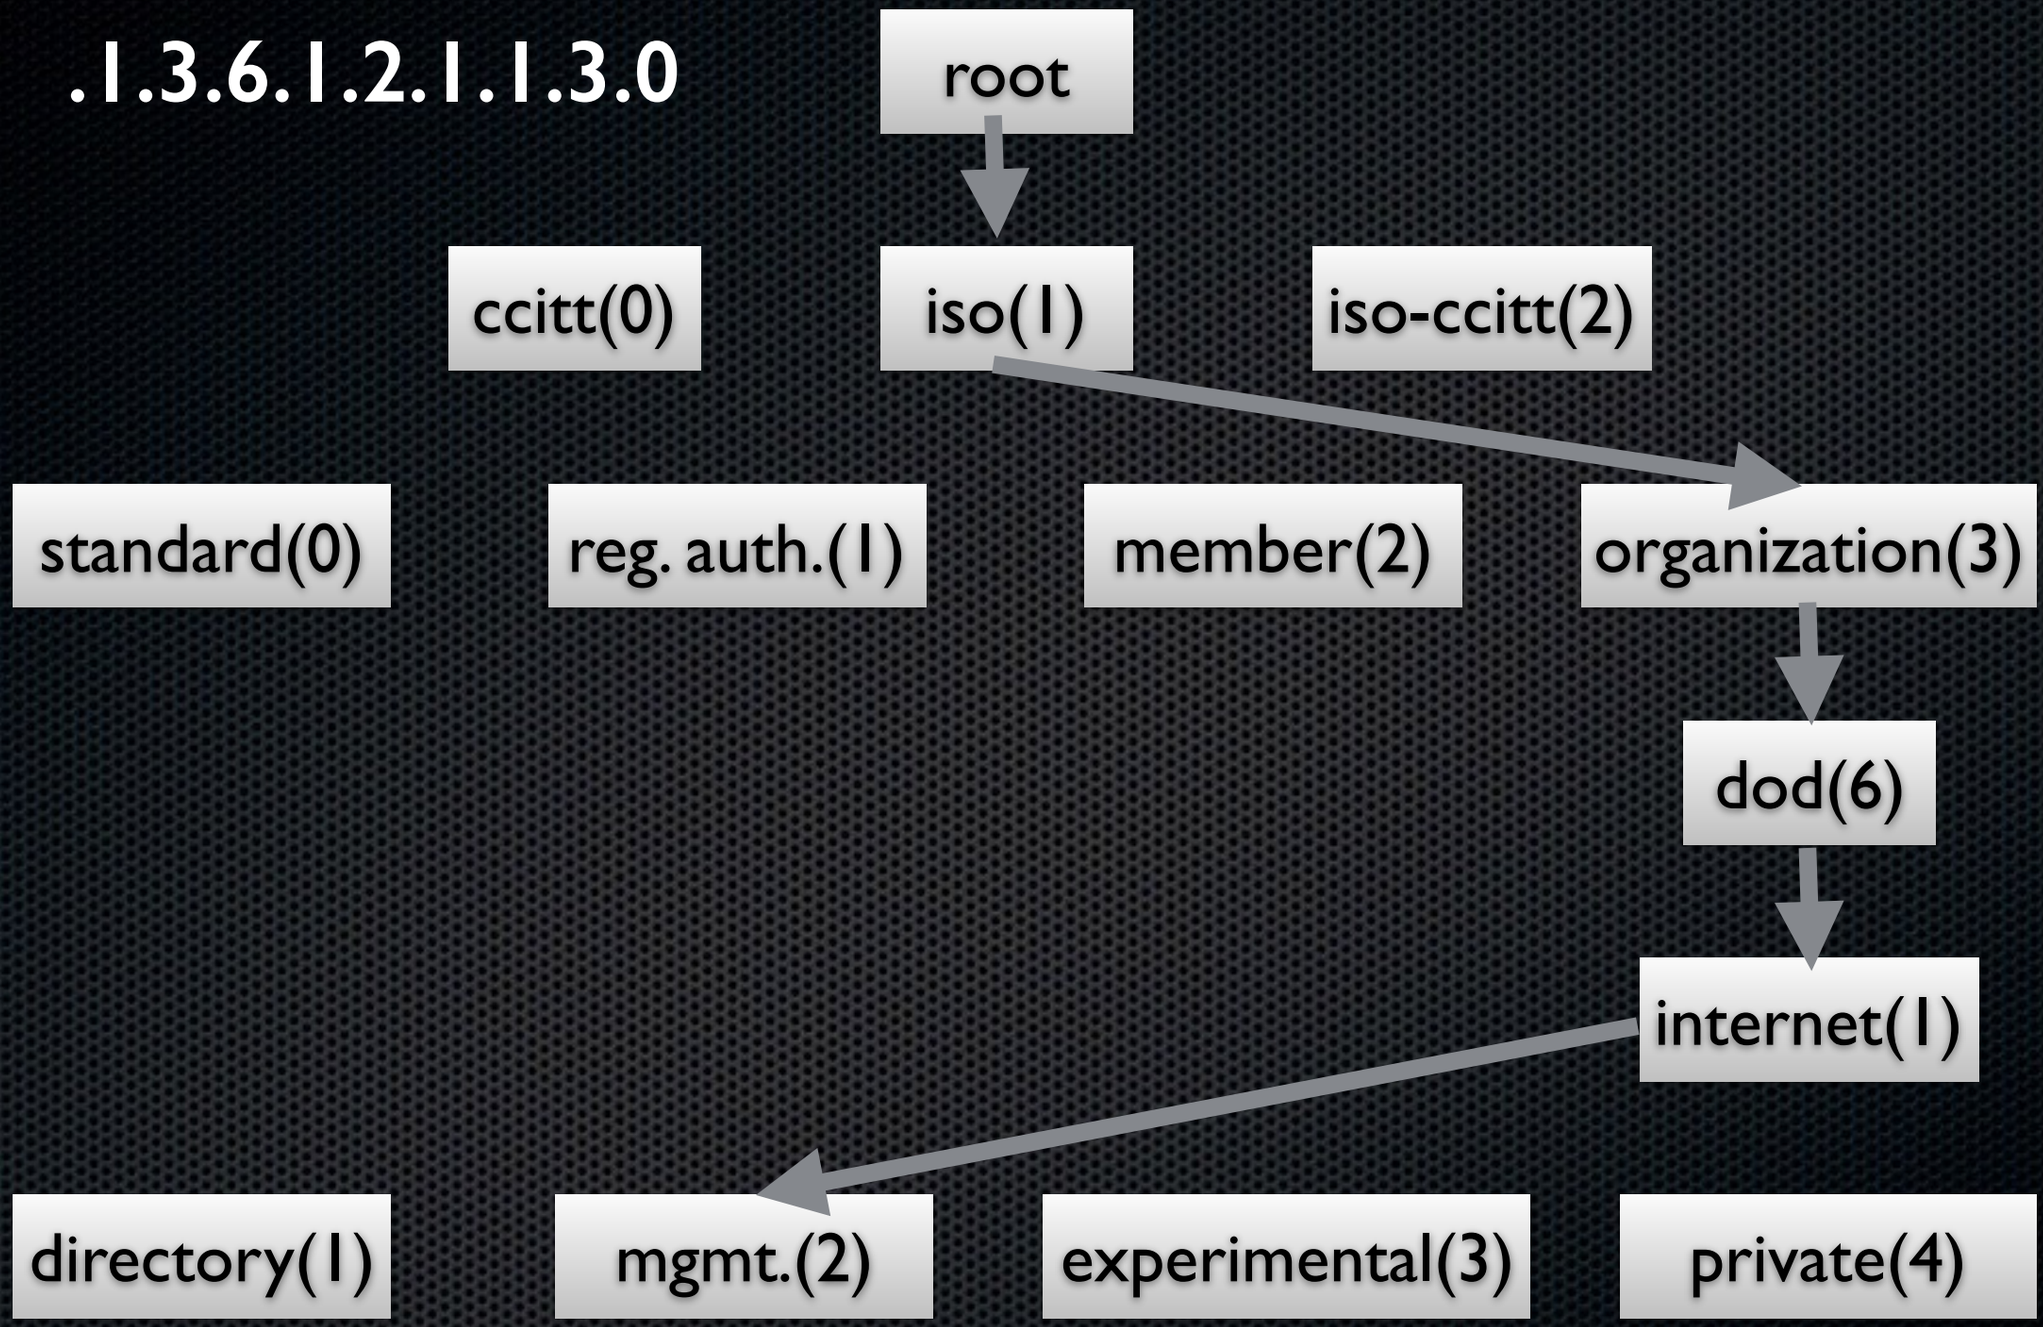
MIB

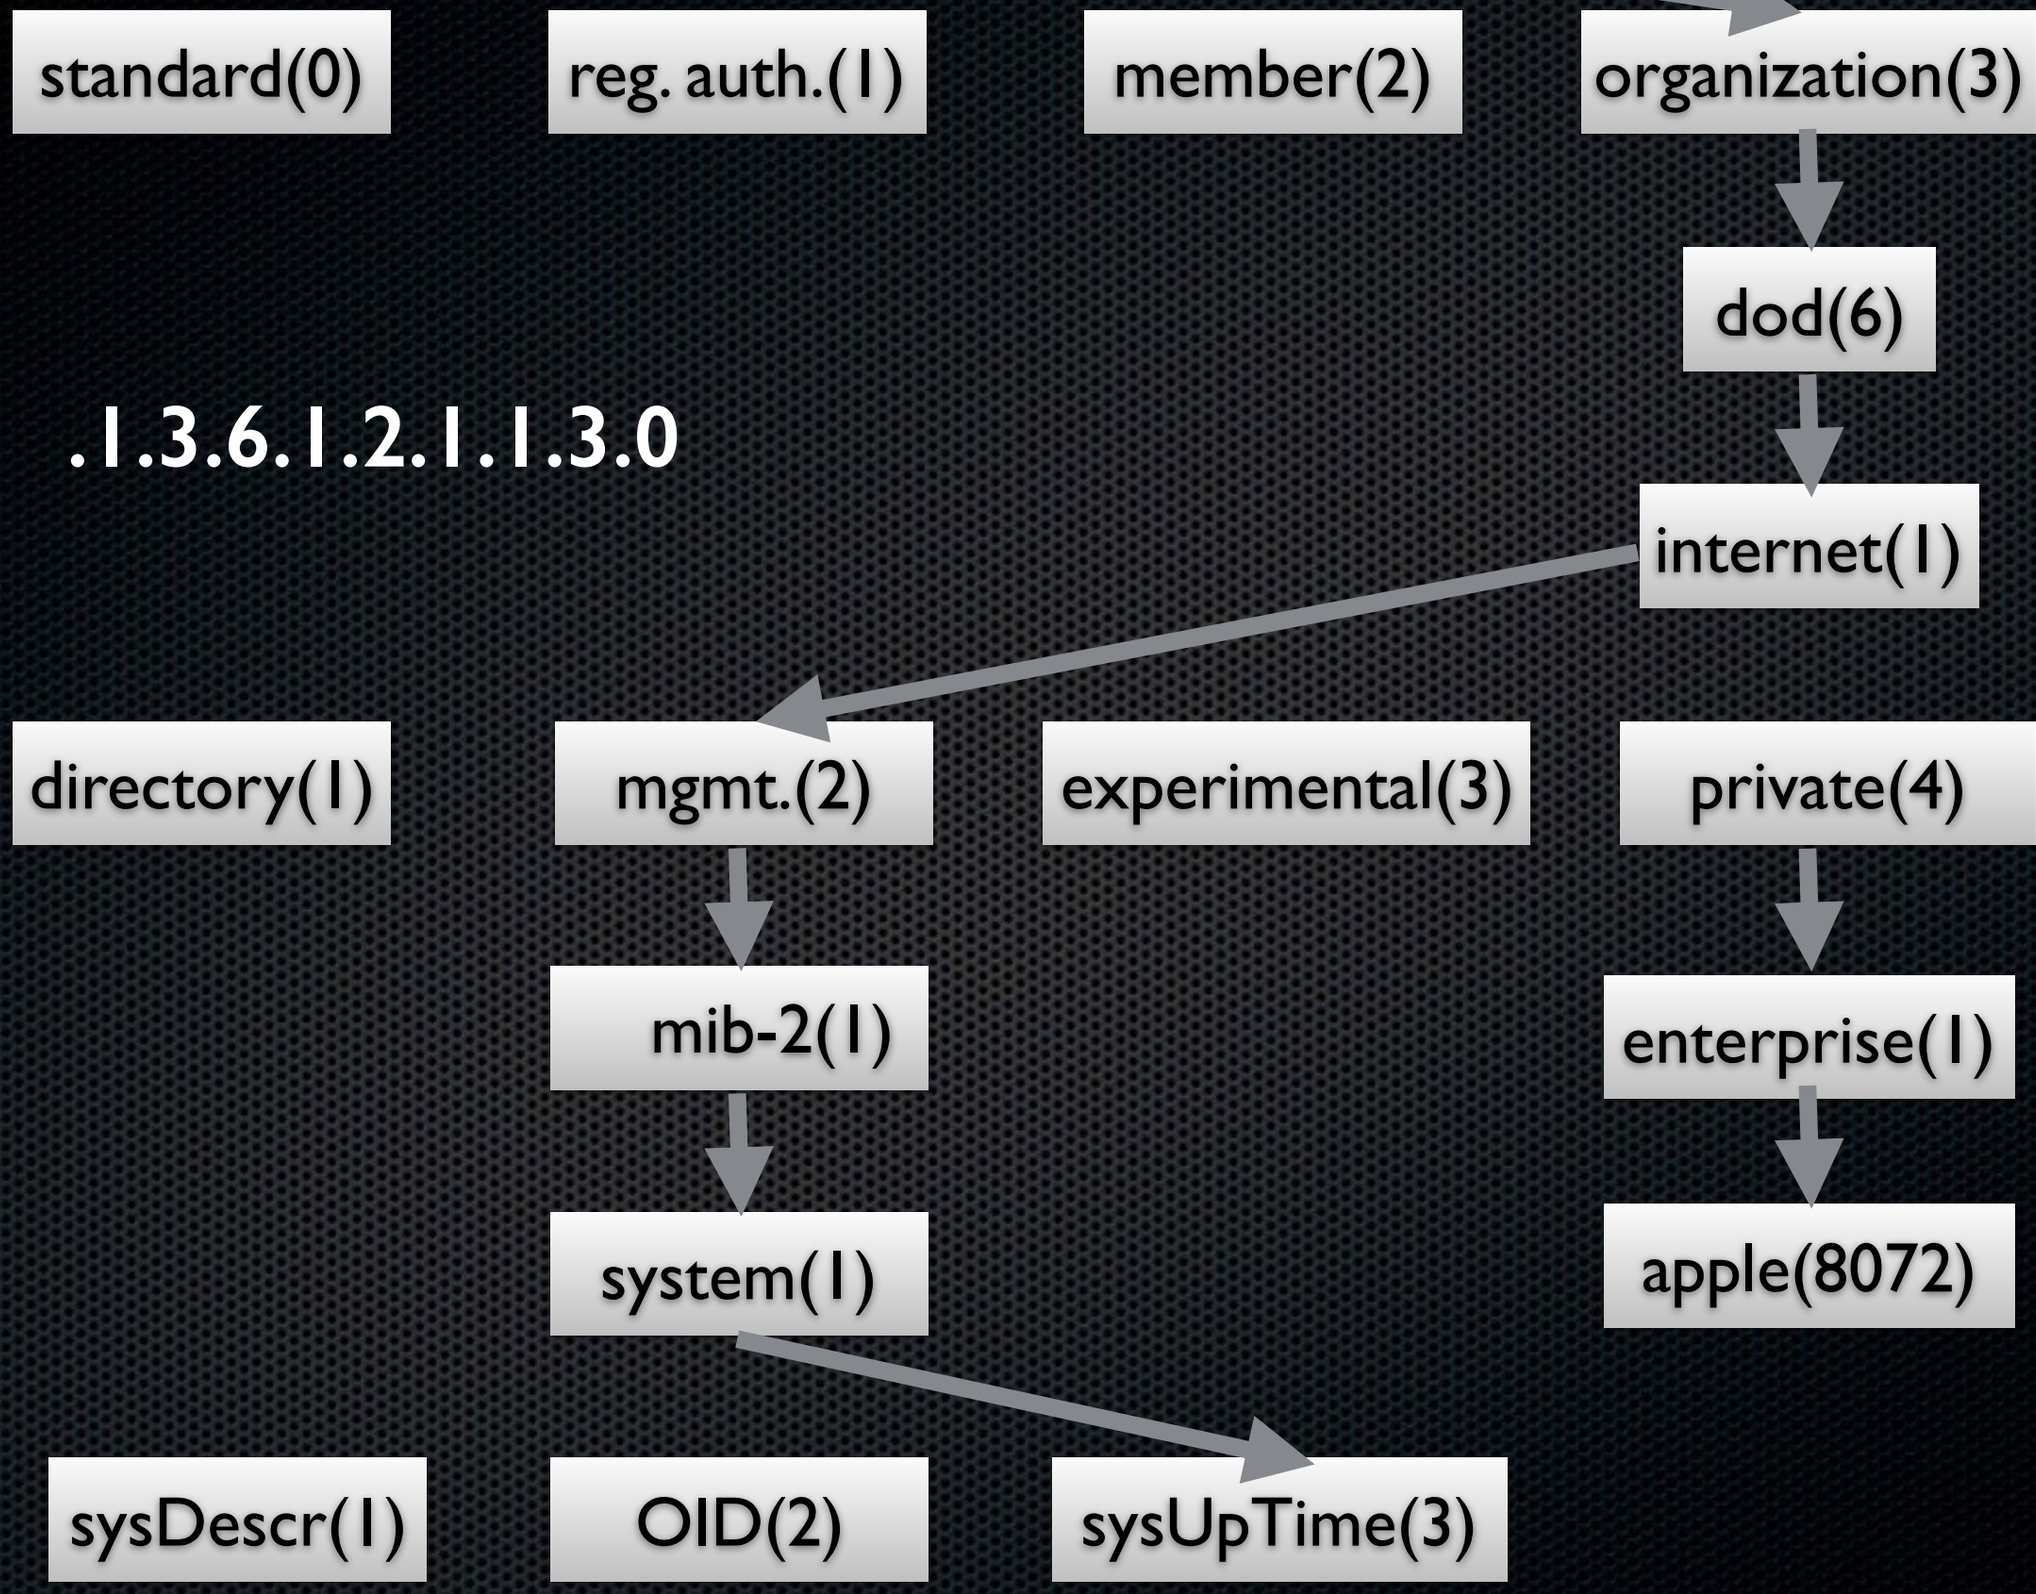
- Dictionary for managing network element
- Each defines a unique Object Identifier (OID)
- OIDs can be Scalar or Tabular
- Every OID is organized hierarchically in MIB

sysUpTime

- OID for the object sysUpTime is .1.3.6.1.2.1.1.3.0
- textual description of sysUpTime OID is iso.org.dod.internet.mgmt.mib-2.system.sysUpTime.

.1.3.6.1.2.1.1.3.0





standard(0)
reg. auth.(1)
member(2)
organization(3)
dod(6)
.1.3.6.1.2.1.1.3.0
internet(1)

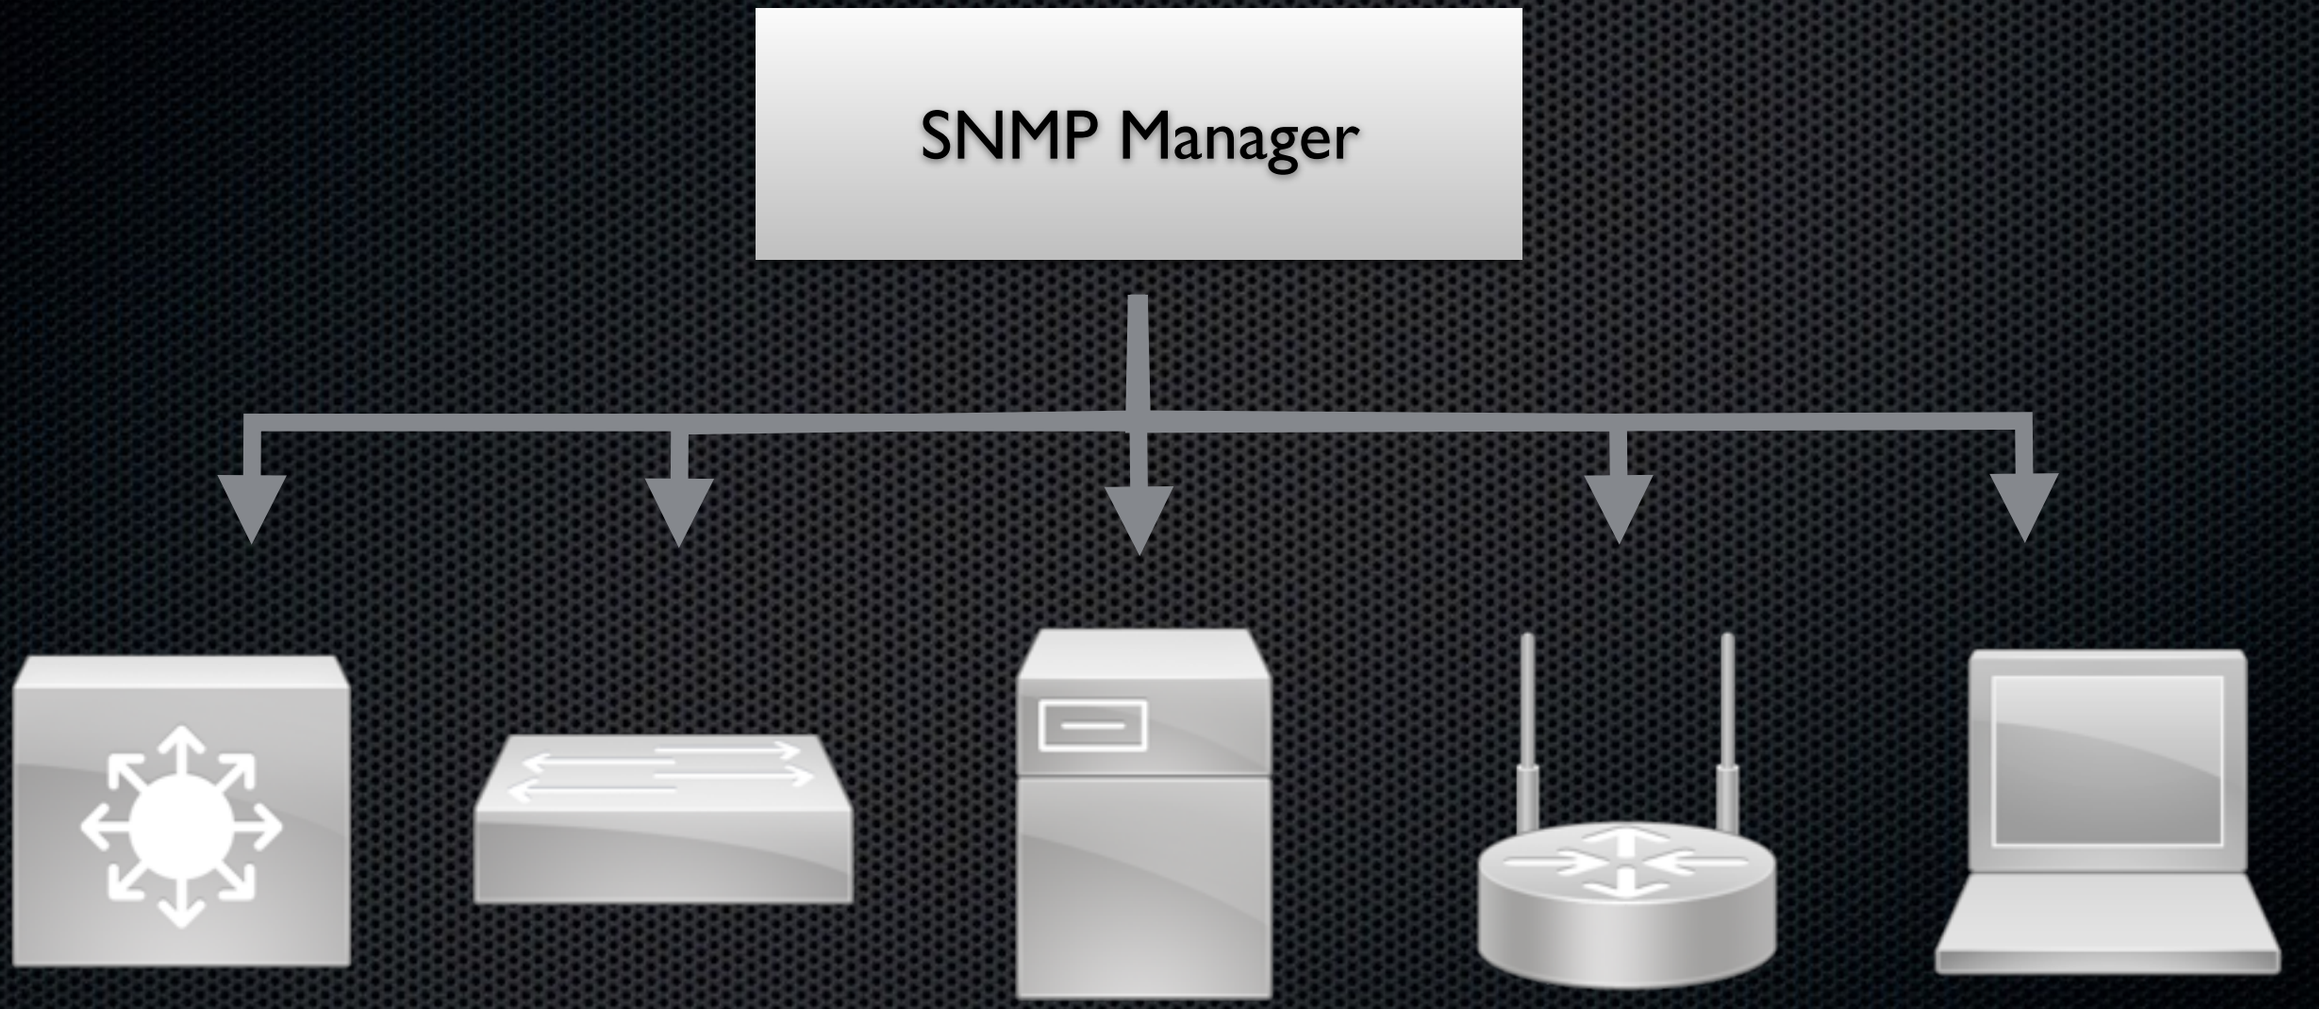
experimental(3)
private(4)
mib-2(1)
enterprise(1)
system(1)
apple(8072)
sysDescr(1)
OID(2)
sysUpTime(3)

SNMP Messages

- SNMP GET
- SNMP GET-NEXT
- SNMP GET-RESPONSE
- SNMP SET
- SNMP TRAP

SNMP Communication



SNMP Communication

SNMP Manager

GET / GETNEXT

Router Switch Server WAP Client

SNMP Communication

SNMP Manager

sysUpTime

Router Switch Server WAP Client

snmpwalk

uses SNMP GETNEXT requests to query a network entity for a tree of information

```
sudo snmpwalk -v 2c -c public -On
10.0.1.1 .1.3.6.1.2.1.1.1

.1.3.6.1.2.1.1.1.0 = STRING: Apple
AirPort – Apple Inc., 2006–2012.  All

SNMP Communication

nmap

Network Mapper

nmap

- Free and Open Sourced
- Network Discovery
- Security Auditing
- Rapidly Scans
  - Large Network
  - Single Host
- Download from nmap.org

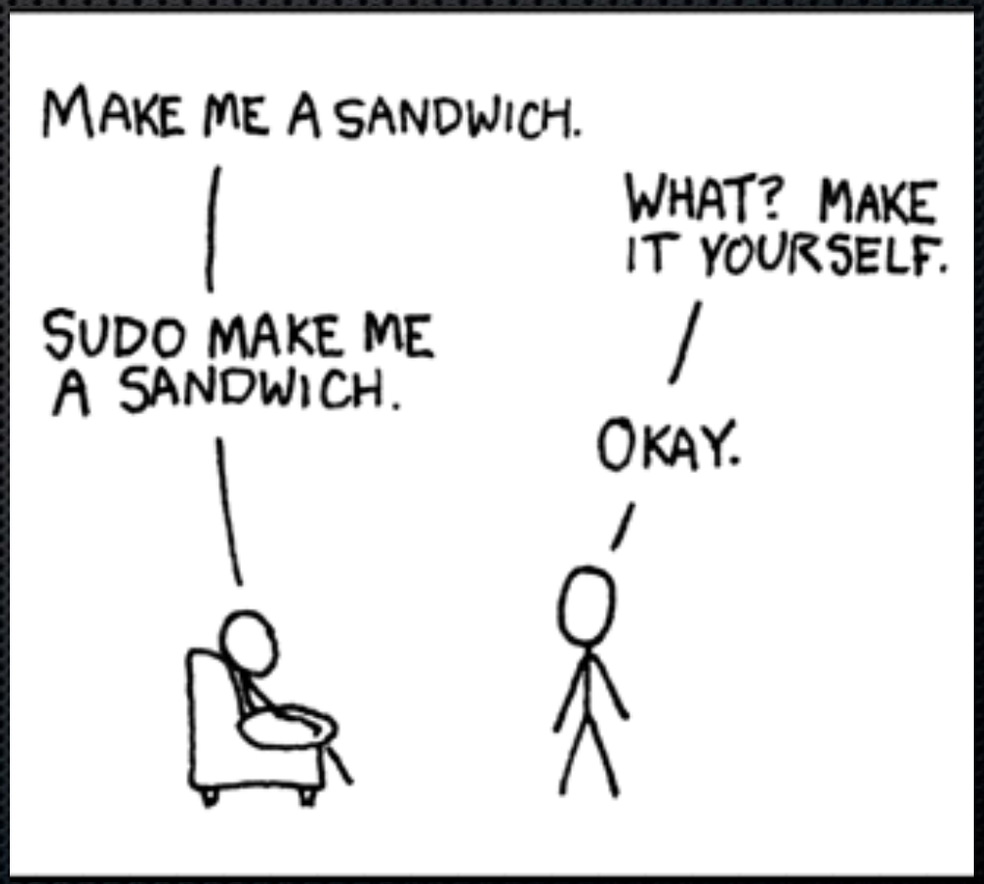
nmap Data Collection

- Available Hosts
- Services Offered
  - Application Name
  - Version
- Operating System
- Packet Filter & Firewall Definition

sudo nmap

Calling nmap

```
sudo nmap [commands]
```



nmap --iflist

Pull routing table

```
Starting Nmap 7.01 ( https://nmap.org ) at 2016-03-13 11:04 PDT
**********************INTERFACES**********************
DEV    (SHORT)   IP/MASK              TYPE        UP   MTU   MAC
lo0    (lo0)     127.0.0.1/8          loopback    up   16384
...

**************************ROUTES**************************

Similar to  ping 255.255.255.255; arp -a
```

nmap [fqdn|ip]

Shows ports, states, services (for the ports)
and a MAC address for each IP being scanned

```
Starting Nmap 7.01 ( https://nmap.org ) at 2016-03-13 12:14 PDT
Nmap scan report for apple.com (17.172.224.47)
Host is up (0.19s latency).
Other addresses for apple.com (not scanned): 17.178.96.59
17.142.160.59
Not shown: 995 filtered ports
PORT     STATE SERVICE
21/tcp   open  ftp
80/tcp   open  http
443/tcp  open  https
554/tcp  open  rtsp
7070/tcp open  realserver

Nmap done: 1 IP address (1 host up) scanned in 28.11 seconds
```

scan a subnet

```
nmap 192.168.0.*
nmap 192.168.0.1/24
```

scan a range

```
nmap 192.168.0.1-20
```

exclude an IP

```
nmap 192.168.0.1-20 --exclude 192.168.0.10
```

a few hosts within that range

```
nmap 192.168.210.1,10,254
```

nmap ports

- Default Scans All Ports
- Specify port(s) with -p
  - T: for only TCP
  - U: for only UDP
  - Neither for both
- Range, Individual, etc.
- `nmap -p 22-25,80,110,143,443`

nmap -A [fqdn]

Operating System Detection

```
...
Warning: OSScan results may be unreliable because we could not
find at least 1 open and 1 closed port
Device type: WAP|storage-misc
Running: Apple embedded
...
```

nmap -v -O --osscan-guess

True Operating System Detection

```
...
Warning: OSScan results may be unreliable because we could not
find at least 1 open and 1 closed port
Device type: WAP|storage-misc
Running: Apple embedded, Peplink embedded
...
```

nmap --dns-servers 8.8.8.8

Overide System DNS

```
...
Nmap scan report for yahoo.com (206.190.36.45)
Host is up (0.073s latency).
Other addresses for yahoo.com (not scanned): 98.138.253.109
98.139.183.24 2001:4998:58:c02::a9 2001:4998:c:a06::2:4008
2001:4998:44:204::a7
rDNS record for 206.190.36.45: ir1.fp.vip.gq1.yahoo.com
Not shown: 995 filtered ports
...
```

Firewall Detection/Evasion

- Firewalls can make mapping difficult
  - intrusion detection systems (IDS)
  - intrusion *prevention* systems (IPS)

nmap -sA [fqdn]

Firewall Detection

```
Nmap scan report for www.apple.com (23.4.129.93)
Host is up (0.025s latency).
Other addresses for www.apple.com (not scanned): 2001:418:142b:
280::1aca 2001:418:142b:298::1aca
rDNS record for 23.4.129.93:
a23-4-129-93.deploy.static.akamaitechnologies.com
Not shown: 997 filtered ports
PORT     STATE      SERVICE
21/tcp   unfiltered ftp
554/tcp  unfiltered rtsp
7070/tcp unfiltered realserver
```

nmap -PN [fqdn]

Firewall Detection

```
Nmap scan report for www.apple.com (23.200.94.74)
Host is up (0.055s latency).
Other addresses for www.apple.com (not scanned):
2001:428:7000:49a::1aca 2001:428:7000:486::1aca
rDNS record for 23.200.94.74:
a23-200-94-74.deploy.static.akamaitechnologies.com
Not shown: 995 filtered ports
PORT     STATE SERVICE
21/tcp   open  ftp
80/tcp   open  http
443/tcp  open  https
554/tcp  open  rtsp
7070/tcp open  realserver
```

See if some devices are up even if behind a firewall

```
nmap -sP 192.168.210.10-20
```

Run a scan using SYN and ACK scans

```
nmap -PS 443 www.apple.com
nmap -PA 443 www.apple.com
```

determine port state

```
nmap -reason www.apple.com
```

Show all sent/received packets

```
nmap -packet-trace www.apple.com
```

determine version of software of remote ports from header

```
nmap -sV www.apple.com
```

nmap Security Scanning

- Test Attacking Your Server (white hat)
- Port Scanning
  - Are Available Ports Expected?
  - Are Filters Working?
  - Survive Brute Force attack?

nmap -v -sT ––spoof-mac 0 fqdn

Spoof a MAC Address

```
Spoofing MAC address 71:8A:97:9B:FA:A2 (No registered vendor)
Initiating Ping Scan at 15:14
Scanning www.apple.com (104.66.211.3) [4 ports]
Completed Ping Scan at 15:14, 3.02s elapsed (1 total hosts)
Nmap scan report for www.apple.com (104.66.211.3) [host down]
Other addresses for www.apple.com (not scanned):
2001:428:7000:486::1aca 2001:428:7000:49a::1aca
Read data files from: /usr/local/bin/../share/nmap
Note: Host seems down. If it is really up, but blocking our ping
probes, try -Pn
Nmap done: 1 IP address (0 hosts up) scanned in 3.18 seconds
           Raw packets sent: 8 (304B) | Rcvd: 0 (0B)
```

nmap -v -sT -Pn --spoof-mac 0 fqdn

Spoof a MAC Address, No Ping

```
Spoofing MAC address 63:E2:89:88:1E:AB (No registered vendor)
Initiating Parallel DNS resolution of 1 host. at 15:15
Completed Parallel DNS resolution of 1 host. at 15:15, 0.03s
elapsed
Initiating Connect Scan at 15:15
Scanning www.apple.com (104.66.211.3) [1000 ports]
Discovered open port 21/tcp on 104.66.211.3
Discovered open port 554/tcp on 104.66.211.3
Discovered open port 443/tcp on 104.66.211.3
Discovered open port 80/tcp on 104.66.211.3
Discovered open port 7070/tcp on 104.66.211.3
Completed Connect Scan at 15:16, 10.47s elapsed (1000 total
ports)
Nmap scan report for www.apple.com (104.66.211.3)
```

Use decoys to avoid scan detection

```
nmap -n -D 10.0.1.10,10.0.1.54,10.0.1.210
```

SYN-Flood Attack

```
nmap -sX www.apple.com
```

Use a custom MTU (Maximum Transmission Unit)

```
nmap –mtu 64 www.apple.com
```

Use fragment packets for TCP header

```
nmap -f www.apple.com
```

ZenMap

- GUI for nmap
- Build nmap commands
- Topology Map
- Requires X11 (XQuartz)
- ZenMap Included with nmap installer
